

SCHOOL:

This can be an extremely stressful time for a teenager. There is typically a great deal of pressure to start making decisions about the future. Grades are extremely important at this age. Your child may be preparing for college preparatory exams and choosing what to do beyond high school. Watch carefully for signs of stress in your teen, such as irritability, depression, and exhaustion. Extracurricular activities can be good for the resume and even boost school performance and self-confidence. Although, too many may be counterproductive. Reward the achievements that your teen accomplishes and help them make a plan for those areas where he/she might be struggling.

WORK:

About half of all high school students have some kind of a full time job. Before your teen considers this, make sure that he/she is fulfilling his/her goals at home and at school. The Child Labor Coalition of the National Consumers League suggests these guidelines: No more than 4 hours per day and 20 hours per week during the school year, No more than 8 hours per day and 40 hours per week during the summer, no working before 7 am or after 10 pm.

IMMUNIZATIONS:

Menactra #2 (Meningococcal vaccine groups A,C,Y, W-135). After the age of 16, your teenager should have completed all of the childhood immunizations. Optional vaccines to consider if not already done: Flu vaccine, Hepatitis A vaccine, HPV vaccine, Meningococcal group B vaccine (Trumenba)

NEXT VISIT:

We recommend seeing your child every year for a healthy check up to monitor for normal physical, emotional, and social growth. Pediatricians often see children through their 18th year and sometimes longer. If you and your teen feel it is time to move on, we would be happy to offer some guidance in making that decision.
